Skills

HTML/CSS

JavaScript

React

Node

REST API

MySQL

Amazon AWS

Enzyme (JavaScript Testing utility for React)

Jest

PHP

Redux

WebdriverIO

Selenium

TypeScript

CucumberJS

Profile

Software engineer based in Las Vegas, NV. The technical skills I have learned focus on the front-end as well as the back-end of web development with a testing background. I have worked with modern day technologies like: React and TypeScript, as well as older technologies like: jQuery. Some of the back-end technologies I have worked with include: MySQL, DynamoDB and Node. I have implemented unit and end-to-end tests. I enjoy creating great user experiences with every project I work on. I believe if you can think it, you can develop it.

Employment History

Software Engineer, PrimeTrust, Las Vegas

November 2020 — Present

- Created front end Fintech web application using React
- Worked with RESTful APIs to add data to React application
- Implemented Redux for better state management of JSON data received from external APIs
- Configured React application to use payment rail APIs. For example, Plaid, Forter, etc.
- Implemented Material-UI to create reusable components for React application
- Assisted clients in the integration process for PrimeTrust's core API

Junior Web Developer / Software Development Engineer in Test, NS8, inc., Las Vegas

July 2019 — September 2020

- Worked with React and TypeScript to create front-end components for e-commerce plugin application
- Created reusable components using React and Storybook
- Implemented unit tests using Enzyme and Jest for all components worked on as well as legacy components
- Monitored Lambdas that created switches between E-commerce platform API(Shopify, BigCommerce and Magento) and NS8's API
- Provided feedback on Pull Requests in GitHub for better workflows
- Assisted in the implementation of automated tests using CodeceptJS and CucumberJS
- Configured continuous integration jobs and workflows using CircleCI for better builds and quicker deployments
- Built test servers using AWS Lightsail and MySQL for Magento e-commerce platform
