HTML/CSS

JavaScript

React

Node

REST API

MySQL

Amazon AWS

Enzyme (JavaScript Testing utility for React)

Jest

PHP

Redux

Profile

Software engineer based in Las Vegas, NV. The technical skills I have learned focus on the front-end as well as the back-end of web development. I have worked with modern day technologies like: React and TypeScript, as well as older technologies like: jQuery. Some of the back-end technologies I have worked with include: MySQL, DynamoDB and Node. I enjoy creating great user experiences with every project I work on. I believe if you can think it, you can develop it.

Employment History

Junior Web Developer / Software Development Engineer in Test, NS8, inc., Las Vegas

July 2019 — September 2020

- Worked with React and TypeScript to create front-end components for e-commerce plugin application
- Created reusable components using React and Storybook
- Implemented unit tests using Enzyme and Jest for all components worked on as well as legacy components
- Monitored Lambdas that created switches between E-commerce platform API(Shopify, BigCommerce and Magento) and NS8's API
- Provided feedback on Pull Requests in GitHub for better workflow
- Assisted in the implementation of automated tests using CodeceptJS and Cucumber
- Configured continuous integration using CircleCI for better builds and quicker deployments
- Built test servers using AWS Lightsail and MySQL for Magento e-commerce platform
